

# This document and the API that it describes are deprecated.

Authorize.Net's legacy SOAP API is still supported, however it will not be updated, except for critical security updates. To learn when this deprecated API will reach its end of life, and for information on upgrading to our latest API, read the [Upgrade Guide](#). You can find the full Authorize.Net API documentation at our [Developer Center](#).

# Merchant Web Services API

## Automated Recurring Billing (ARB) SOAP Guide

# Revision History

This table lists the changes made in the last six releases of this document:

Release	Changes
October 2016	Authorize.Net's API documentation is now presented in a rich web interface at <a href="http://developer.authorize.net/api/">http://developer.authorize.net/api/</a> . PDF documentation is officially deprecated and will not be updated.
December 2015	This revision contains only editorial changes and no technical updates.
August 2015	Updated EVOSnap information in " <a href="#">Payment Processors</a> ," page 9.
July 2015	Added a section about EVOSnap to " <a href="#">Payment Processors</a> ," page 9. Added a new production URL to " <a href="#">ARB API URLs</a> ," page 19.
April 2015	Marked the <b>firstName</b> and <b>lastName</b> elements of the <b>billTo</b> field as required.

# Developer Introduction

This guide describes the Web development required to submit Automated Recurring Billing™ (ARB), or subscription-based, payments to the Authorize.Net Payment Gateway directly from a Web site or other application using Simple Object Access Protocol (SOAP).

SOAP provides a standards-based mechanism to access Web services from a wide range of platforms. Typically, clients access the Web services using a SOAP client on their respective programming environment. The SOAP client typically generates the native objects and interfaces based on a Web Services description Language (WSDL) that is published by Authorize.Net. The client application initializes the local object and invokes the method as if it is calling a local procedure. The SOAP client handles the generation and parsing of the underlying extensible markup language (XML) documents that form the basis of the SOAP protocol.

The Authorize.Net ARB Application Programming Interface (API) provides a mechanism for developers and Value-Added Resellers (VARs) to create, update and cancel ARB subscriptions by means of direct integration between client software or applications and the Authorize.Net Payment Gateway.

A subscription is a set of multiple transactions, or payments, created for the purchase of a subscription-based product or service or for an installment-based payment plan. Payments for the subscription are then generated by the payment gateway at later dates based on a specified payment schedule and subscription duration.

ARB subscriptions **do not** process transactions in real time. Successful creation of an ARB subscription transaction does not indicate that the subscription payments that process through your account will be successful. ARB subscription transactions process at approximately 2:00 a.m. PST on their scheduled payment dates. Therefore the first scheduled transaction will not be sent to the customer's bank for authorization until approximately 2:00 a.m. PST on the start date that you specified when you created the subscription in your account. If you create a subscription with a start date that equals the creation date, the first scheduled payment will not process until after 2:00 a.m. the following day. If you wish to validate your customer's payment information before creating their subscription in your account, please use one of the real-time transaction processing methods, such as the Advanced Integration Method (AIM).

The ARB API behaves the same as when a merchant creates, updates, and cancels ARB subscriptions in the Merchant Interface. When a merchant creates a subscription in the Merchant Interface, they enter all required information (customer payment information, subscription interval and duration, etc.) into the Create New ARB Subscription form. When

the merchant submits the information, the Subscription Confirmation page returns a message to the merchant indicating whether or not the subscription was created successfully. The subscription ID assigned for a successfully created subscription is also displayed.

The ARB API accomplishes these same functions through an XML call and subsequent XML response. Whether a subscription is created in the Merchant Interface or through the ARB API, the results are the same.

**Note**

Log on to the Merchant Interface to step through the manual ARB process. If you do not have a live production account to use for this purpose, you can request a [developer test account](#) from our [Developer Center](#). Be sure to include in the comments section that you need the ARB feature enabled for your test account. ARB subscription transactions never process through our test environment, so if you use a test environment account, you never see an ARB subscription transaction process. If you wish to see an ARB subscription transaction process, you **MUST** use your live production account.

---

Please refer to specific SOAP client documentation for details on how to use SOAP-based Web services.

## Minimum Requirements

---

Before you begin ARB integration for an Authorize.Net Payment Gateway account, please check with the merchant to make sure that the following minimum requirements have already been met.

- The merchant must have a merchant bank account that allows Internet transactions.
- The merchant must have an active Authorize.Net Card Not Present Payment Gateway account.
- The merchant must be registered for the Authorize.Net ARB service.
- Test Mode must be disabled.
- The merchant must store account authentication data such as API login ID and transaction key securely .

**Note**

Merchants should avoid storing any type of sensitive cardholder information. However, if a merchant or third party must store sensitive customer business or payment information, they must comply with industry standard storage requirements. See the [Standards, Compliance, and Security](#) training video.

---

# Payment Processors

The merchant's payment processor determines the card types and currencies that the merchant can support.

## North American Payment Processors

Authorize.Net supports the following payment processors, card types, and currencies.

**Table 1 North American Payment Processors, Accepted Card Types, and Accepted Currencies**

Payment Processor	Accepted Card Types	Accepted Currencies
Chase Paymentech Tampa	<ul style="list-style-type: none"> <li>■ American Express</li> <li>■ Diners Club</li> <li>■ Discover</li> <li>■ JCB</li> <li>■ Mastercard</li> <li>■ Visa</li> </ul>	United States Dollar (USD) Canadian Dollar (CAD)
Elavon	<ul style="list-style-type: none"> <li>■ American Express</li> <li>■ Diners Club</li> <li>■ Discover</li> <li>■ JCB</li> <li>■ Mastercard</li> <li>■ Visa</li> </ul>	United States Dollar (USD) Canadian Dollar (CAD)
EVO Payments	<ul style="list-style-type: none"> <li>■ American Express</li> <li>■ Discover</li> <li>■ JCB</li> <li>■ Mastercard</li> <li>■ Visa</li> </ul>	United States Dollar (USD)
First Data Merchant Services (FDMS) Omaha, Nashville, and EFSNet	<ul style="list-style-type: none"> <li>■ American Express</li> <li>■ Diners Club</li> <li>■ Discover</li> <li>■ JCB</li> <li>■ Mastercard</li> <li>■ Visa</li> </ul>	United States Dollar (USD) Canadian Dollar (CAD)

**Table 1 North American Payment Processors, Accepted Card Types, and Accepted Currencies (Continued)**

<b>Payment Processor</b>	<b>Accepted Card Types</b>	<b>Accepted Currencies</b>
Global Payments	<ul style="list-style-type: none"> <li>■ American Express</li> <li>■ Diners Club</li> <li>■ Discover</li> <li>■ JCB</li> <li>■ Mastercard</li> <li>■ Visa</li> </ul>	United States Dollar (USD) Canadian Dollar (CAD)
Heartland Payment Systems	<ul style="list-style-type: none"> <li>■ American Express</li> <li>■ Diners Club</li> <li>■ Discover</li> <li>■ JCB</li> <li>■ Mastercard</li> <li>■ Visa</li> </ul>	United States Dollar (USD)
TSYS Acquiring Solutions	<ul style="list-style-type: none"> <li>■ American Express</li> <li>■ Diners Club</li> <li>■ Discover</li> <li>■ JCB</li> <li>■ Mastercard</li> <li>■ Visa</li> </ul>	United States Dollar (USD)
WorldPay Atlanta	<ul style="list-style-type: none"> <li>■ American Express</li> <li>■ Diners Club</li> <li>■ Discover</li> <li>■ JCB</li> <li>■ Mastercard</li> <li>■ Visa</li> </ul>	United States Dollar (USD)

## European Payment Processors

Authorize.Net supports the following European payment processors, card types, and currencies.

**Table 2 European Payment Processors, Accepted Card Types, and Accepted Currencies**

Payment Processor	Accepted Card Types	Accepted Currencies
AIB Merchant Services	<ul style="list-style-type: none"> <li>■ Mastercard</li> <li>■ Visa</li> </ul>	British Pounds (GBP) Euro (EUR) United States Dollar (USD)
Barclaycard	<ul style="list-style-type: none"> <li>■ JCB</li> <li>■ Mastercard</li> <li>■ Visa</li> </ul>	British Pounds (GBP) Euro (EUR)
First Data Merchant Solutions (MSIP platform)	<ul style="list-style-type: none"> <li>■ Mastercard</li> <li>■ Visa</li> </ul>	British Pounds (GBP)
HSBC Merchant Services	<ul style="list-style-type: none"> <li>■ Mastercard</li> <li>■ Visa</li> </ul>	British Pounds (GBP) Euro (EUR) United States Dollar (USD)
Lloyds Bank Cardnet	<ul style="list-style-type: none"> <li>■ Mastercard</li> <li>■ Visa</li> </ul>	British Pounds (GBP)
Streamline	<ul style="list-style-type: none"> <li>■ JCB</li> <li>■ Mastercard</li> <li>■ Visa</li> </ul>	British Pounds (GBP) Euro (EUR) United States Dollar (USD)

## Asia-Pacific Processors

Authorize.Net supports the following Asia-Pacific payment processors for Card-Not-Present (CNP) transactions.

**Table 3 Asia-Pacific Payment Processor, Accepted Card Types, and Accepted Currencies**

Payment Processor	Accepted Card Types	Accepted Currencies
FDI Australia	<ul style="list-style-type: none"> <li>■ Mastercard</li> <li>■ Visa</li> </ul>	Australian Dollar (AUD) New Zealand Dollar (NZD) United States Dollar (USD)
Westpac	<ul style="list-style-type: none"> <li>■ Mastercard</li> <li>■ Visa</li> </ul>	Australian Dollar (AUD)

## EVOSnap

There are multiple EVOSnap processing platforms. If you use the U.S. Dollar (USD), you are assigned to EVOSnap U.S. If you use any other currencies, you are assigned to EVOSnap International.

### Accepted Authorization/Settlement Currencies

- USD—U.S. Dollar
- CAD—Canada Dollar
- CHF—Swiss Franc
- DKK—Danish Krone
- EUR—Euro
- GBP—British Pound
- NOK—Norway Krone
- PLN—Poland złoty (MasterCard Only)
- SEK—Sweden Krone
- ZAR—South African Rand

### Accepted Billing Currencies

- USD—U.S. Dollar
- AUD—Australian Dollar
- GBP—British Pound

### Accepted Card Types

- Visa
- MasterCard
- American Express
- JCB
- Diners Club—Supported for U.S. services only.

### Unsupported Services

Apple Pay and soft descriptors are not supported by EVOSnap.

## EVOSnap Supported Services

### U.S. Services

**Table 4 Authorize.Net Services Supported by EVOSnap U.S.**

Service	E-Commerce	MOTO	Retail
<b>Transaction Types</b>			
Authorization only	X	X	X
Authorization and capture (sale)	X	X	X
Capture	X	X	X
Void	X	X	X
Credit (refund)	X	X	X
<b>Features</b>			
AVS	X	X	X
CVV2/CVC2/CID	X	X	X
3DS	X		
Purchase card—level 2	X	X	X
Partial Approvals (Partial Authorization)	X	X	X
Supported card types:	X	X	X
<ul style="list-style-type: none"> <li>■ Visa</li> <li>■ Mastercard</li> <li>■ American Express</li> <li>■ Discover</li> <li>■ JCB</li> <li>■ Diners Club</li> </ul>			

### Duplication Rules

EVO platform always checks for duplicate transactions based on:

- Same Terminal ID
- Same Card Number
- Same Dollar Amount

Duplicates are flagged when they occur within an hour of each other.

### Magstripe

Track 2 data is supported only for card-present transactions.

### Level 2 Support

PO# is required when any level 2 data is submitted. Level 2 data includes tax, duty, and freight information.

### **Billing Address**

When any billing fields are submitted, all must be submitted.

- First name
- Last name
- Address
- City
- State/province (only required if country is US or Canada)
- Country
- ZIP/postal code

### **Other Field Requirements**

The **employeeld** field is required; however, if a value is not passed with the field, Authorize.Net sends a default value of 0000 to the processor.

### **Consolidated Accounts**

The Consolidated Accounts feature is not supported on the EVOSnap platform. Multiple market types require multiple accounts.

### **Automated Recurring Billing**

Merchants using Automated Recurring Billing must be approved by their merchant service provider, also known as their acquirer.

## International Services

**Table 5 Authorize.Net Services Supported by EVOSnap International**

Service	MOTO	E-Commerce
Authorize	X	X
Authorize and Capture	X	X
Capture	X	X
Void	X	X
Credit	X	X
AVS—Visa and American Express only.	X	X
CVV2/CVC2/CID	X	X
3DS		X

### Not Supported

- Retail
- Level 2 data
- Soft descriptors
- Partial authorization
- Consolidated accounts (MOTO/E-Commerce)—separate accounts are required.
- Automated recurring billing and customer information manager

### CVV

EVOSnap requires CVV for all international transactions. CVV must be enabled in the Authorize.Net merchant interface's Virtual Terminal settings.

### To enable CVV:

- 
- Step 1** Navigate to the Authorize.Net merchant interface.
  - Step 2** Choose **Accounts > Settings > Transaction Format Settings > Virtual Terminal**.
  - Step 3** Check the **View/Edit** box for **Card Code**.
  - Step 4** Click **Submit**.
- 

## Other EVOSnap Considerations

### International AVS Behavior

Transactions are declined if the submitted address data does not match. Merchants can override this behavior on a per-transaction basis, if permitted by EVOSnap. Merchant

accounts are configured to either use or not use AVS processing when they are boarded. If the account is configured to not use AVS processing, AVS is not performed, even if the data is included. If the merchant account is configured to use AVS every transaction must include AVS data, unless the merchant is authorized by EVOSnap to override the AVS processing.

## API

Customer code is required. If not present, customer code is populated with 0000. Country code must be in ISO format. For example, GBR, CHE, AUS.

## Error Codes

- **RTC 350**  
Description—EVOSnap: country must be a valid three-character value if specified.  
Message—country must be a valid three-character value if specified.
- **RTC 351**  
Description—EVOSnap: employee ID cannot be more than 6 characters in length, 4 for a retail transaction.  
Message—employee ID must be 1 to %x characters in length.  
Note—the %x is replaced with a 6 for E-Commerce and MOTO transaction types and 4 for retail transaction types.

## Billing Information

When any billing information is submitted, all billing fields must be provided.

# Developer Support

---

The following resources can help you successfully integrate a merchant web site or other application to the Authorize.Net Payment Gateway.

- The [Developer Center](#) provides sandbox accounts, sample code, FAQs, and troubleshooting tools.
- [Developer training videos](#) cover a variety of topics.
- The [developer community](#) provides answers to questions from other Authorize.Net developers.
- Ask us a question at our [Developer Support](#) page.
- Search our [knowledge base](#) for answers to commonly asked questions.

To submit suggestions for improving or correcting this guide, send email to [documentation@authorize.net](mailto:documentation@authorize.net).

# Software Development Kits

---

Authorize.Net offers Software Development Kits (SDKs) that present an alternate object-oriented model, in several popular languages. The SDK performs the core payment activities (such as error handling and parsing, network communication, and data encoding) behind the scenes.

The SDK provides utility methods to help developers build payment flows for each of the integration methods. You can download the SDKs:

<http://developer.authorize.net/downloads/>

# Executing an API Call

The following sections describe the minimum requirements for executing an API call for an ARB subscription request using SOAP.

You can develop the subscription request script in one of two ways:

- by yourself, using the API field information in this section
- using Authorize.Net sample code available for free from our [Developer Center](#). Unfortunately, we cannot offer all programming languages requested. If you do not wish to use the ARB sample code, use your knowledge of your chosen language, along with this guide, to create your own.

**Note**

If you choose to use Authorize.Net sample code, be aware that in order to achieve a successful implementation, you must modify it with the merchant's specific payment gateway account information.

---

## Note for .NET Programmers

---

When you use serialization with optional parameters, then the .NET language you are using automatically creates Boolean properties that indicate whether or not non-nullable parameters are specified. For example, if there is a parameter named `validationMode` that is an Enumeration type, a parameter called `validationModeSpecified` is automatically created. By default, these properties are set to false. If a request passes a value for an optional parameter, be sure to set these properties to true so that the value is not ignored.

# ARB API URLs

---

Post API requests to the following locations:

**Table 6 API Request URLs**

Item	Location
Web Service URL in Production	<a href="https://api2.authorize.net/soap/v1/Service.asmx">https://api2.authorize.net/soap/v1/Service.asmx</a> Legacy but supported URL: <a href="https://api.authorize.net/soap/v1/Service.asmx">https://api.authorize.net/soap/v1/Service.asmx</a>
Web Service URL in Developer Test	<a href="https://apitest.authorize.net/soap/v1/Service.asmx">https://apitest.authorize.net/soap/v1/Service.asmx</a>
WSDL	<a href="https://api.authorize.net/soap/v1/Service.asmx?WSDL">https://api.authorize.net/soap/v1/Service.asmx?WSDL</a>

**Note**

Do not submit transactions to an IP address. Use the URLs shown above.

**Note**

The Developer Test URL requires the use of a developer test payment gateway account. Production accounts cannot be used to test against the developer test URL, and vice versa.

# ARB Subscription Functions

---

The ARB API includes the following functions:

- ARBCreateSubscription
- ARBUpdateSubscription
- ARBCancelSubscription
- ARBGetSubscriptionList

Each API submission can contain only one ARB request. Including more than one request per submission will result in an error.

The following sections describe the input parameters required for executing the functions listed above. Indentations in the Parameter column indicate grouping hierarchy. **All parameters are case-sensitive and must be submitted in the order listed here.**

**Parameters are required unless otherwise indicated. Optional parameters should not be submitted unless they contain valid values.**

**Note**

Parameters required for individual API calls are in addition to the authentication parameters required for all API calls.

## Authentication

All calls to the ARB API require merchant authentication. The following table shows the required XML elements.

**Table 7 Authentication parameters**

Element	Description
merchantAuthentication	Contains the merchant's payment gateway account authentication information
<ul style="list-style-type: none"> <li>■ name</li> </ul>	<p><b>Value:</b> The merchant's valid API login ID</p> <p><b>Format:</b> Up to 25 characters</p> <p><b>Notes:</b> Submit the API login ID used to submit transactions.</p>
<ul style="list-style-type: none"> <li>■ transactionKey</li> </ul>	<p><b>Value:</b> The merchant's valid transaction key</p> <p><b>Format:</b> 16 characters</p> <p><b>Notes:</b> Submit the transaction key obtained by the merchant from the Merchant Interface.</p>

**Note**

The sample code included in this document uses generic field values. When using or testing sample code, be sure to enter valid field values. Additional sample code is available for download from the Authorize.Net [Developer Center](#).

## Input Elements for ARBCreateSubscription

The following table represents the input elements for executing an API call to the ARBCreateSubscription function, in addition to the authentication elements. Indentations in the Element column indicate grouping hierarchy.

**Note**

For subscriptions with a monthly interval, whose payments begin on the 31st of a month, payments for months with less than 31 days will occur on the last day of the month.

**Table 8** Input elements for ARBCreateSubscription

Parameter	Description
refid	<p><b>Value:</b> Merchant-assigned reference ID for the request.</p> <p><b>Required:</b> No.</p> <p><b>Format:</b> Up to 20 characters.</p> <p><b>Notes:</b> If included in the request, this value is included in the response. This feature might be especially useful for multi-threaded applications.</p>
subscription	Contains information about the subscription.
<ul style="list-style-type: none"> <li>■ name</li> </ul>	<p><b>Value:</b> Merchant-assigned name for the subscription.</p> <p><b>Required:</b> No.</p> <p><b>Format:</b> Up to 50 characters.</p>
<ul style="list-style-type: none"> <li>■ paymentSchedule</li> </ul>	Contains information about the payment schedule.
<ul style="list-style-type: none"> <li> <ul style="list-style-type: none"> <li>● interval</li> </ul> </li> </ul>	Contains information about the interval of time between payments.
<ul style="list-style-type: none"> <li> <ul style="list-style-type: none"> <li> <ul style="list-style-type: none"> <li>● ● ● length</li> </ul> </li> </ul> </li> </ul>	<p><b>Value:</b> The measurement of time, in association with the Interval Unit, that is used to define the frequency of the billing occurrences.</p> <p><b>Format:</b> Up to 3 digits.</p> <p><b>Notes:</b> If the Interval Unit is "months," can be any number between one (1) and 12. If the Interval Unit is "days," can be any number between seven (7) and 365.</p>
<ul style="list-style-type: none"> <li> <ul style="list-style-type: none"> <li> <ul style="list-style-type: none"> <li>● ● ● unit</li> </ul> </li> </ul> </li> </ul>	<p><b>Value:</b> The unit of time, in association with the Interval Length, between each billing occurrence.</p> <p><b>Format:</b> days, months</p>
<ul style="list-style-type: none"> <li> <ul style="list-style-type: none"> <li>● startDate</li> </ul> </li> </ul>	<p><b>Value:</b> The date the subscription begins (also the date the initial billing occurs).</p> <p><b>Format:</b> YYYY-MM-DD</p> <p><b>Notes:</b> The date entered must be greater than or equal to the date the subscription was created.</p> <p>The validation checks against local server date, which is Mountain Time. An error might possibly occur if you try to submit a subscription from a time zone where the resulting date is different; for example, if you are in the Pacific time zone and try to submit a subscription between 11:00 PM and midnight, with a start date set for today.</p> <p>If the start date is the 31st, and the interval is monthly, the billing date is the last day of each month (even when the month does not have 31 days).</p>
<ul style="list-style-type: none"> <li> <ul style="list-style-type: none"> <li>● totalOccurrences</li> </ul> </li> </ul>	<p><b>Value:</b> Number of billing occurrences or payments for the subscription.</p> <p><b>Format:</b> Up to 4 digits.</p> <p><b>Notes:</b> To submit a subscription with no end date (an ongoing subscription), this field must be submitted with a value of "9999."</p> <p>If a trial period is specified, this number should include the Trial Occurrences.</p>

**Table 8 Input elements for ARBCreateSubscription (Continued)**

Parameter	Description
<ul style="list-style-type: none"> <li>• trialOccurrences</li> </ul>	<p><b>Value:</b> Number of billing occurrences or payments in the trial period.</p> <p><b>Required:</b> No.</p> <p><b>Format:</b> Up to 2 digits.</p> <p><b>Notes:</b> If a trial period is specified, this number must be included in the Total Occurrences.</p>
<ul style="list-style-type: none"> <li>■ amount</li> </ul>	<p><b>Value:</b> The amount to be billed to the customer for each payment in the subscription.</p> <p><b>Format:</b> Up to 15 digits.</p> <p><b>Notes:</b> If a trial period is specified, this is the amount that will be charged after the trial payments are completed.</p>
<ul style="list-style-type: none"> <li>■ trialAmount</li> </ul>	<p><b>Value:</b> The amount to be charged for each payment during a trial period.</p> <p><b>Required:</b> Conditional.</p> <p><b>Format:</b> Up to 15 digits.</p> <p><b>Notes:</b> Required when trial occurrences is specified.</p> <p>Once the number of trial occurrences for the subscription is complete, the regular amount will be charged for each remaining payment.</p>
<ul style="list-style-type: none"> <li>■ payment</li> </ul>	Contains either the customer's credit card or bank account payment information.
<ul style="list-style-type: none"> <li>• creditCard</li> </ul>	<p><b>Value:</b> Contains the customer's credit card information.</p> <p><b>Notes:</b> Include this element only when the payment method is credit card.</p>
<ul style="list-style-type: none"> <li>• • • cardNumber</li> </ul>	<p><b>Value:</b> The credit card number used for payment of the subscription.</p> <p><b>Format:</b> 13 to 16 digits.</p>
<ul style="list-style-type: none"> <li>• • • expirationDate</li> </ul>	<p><b>Value:</b> The expiration date of the credit card used for the subscription.</p> <p><b>Format:</b> YYYY-MM</p>
<ul style="list-style-type: none"> <li>• • • cardCode</li> </ul>	<p><b>Value:</b> The three- or four-digit card code on the back of most credit cards, on the front for American Express.</p> <p><b>Required:</b> No.</p> <p><b>Format:</b> 3 or 4 digits.</p> <p><b>Notes:</b> include this element only when the merchant has set the card code value field to <b>required</b> in the account settings. The value itself is never validated.</p>
<ul style="list-style-type: none"> <li>• bankAccount</li> </ul>	<p><b>Value:</b> Contains the customer's bank account information.</p> <p><b>Notes:</b> Include this element only when the payment method is bank account.</p>
<ul style="list-style-type: none"> <li>• • • accountType</li> </ul>	<p><b>Value:</b> The type of bank account used for payment of the subscription.</p> <p><b>Format:</b> checking, businessChecking, savings.</p>
<ul style="list-style-type: none"> <li>• • • routingNumber</li> </ul>	<p><b>Value:</b> The routing number of the customer's bank .</p> <p><b>Format:</b> 9 digits.</p>
<ul style="list-style-type: none"> <li>• • • accountNumber</li> </ul>	<p><b>Value:</b> The bank account number used for payment of the subscription.</p> <p><b>Format:</b> 5 to 17 digits.</p>

**Table 8 Input elements for ARBCreateSubscription (Continued)**

Parameter	Description
• • • nameOnAccount	<b>Value:</b> The full name of the individual associated with the bank account number. <b>Format:</b> Up to 40 characters.
• • • echeckType	<b>Value:</b> The type of electronic check transaction used for the subscription. <b>Format:</b> For checking or savings accounts, ARC, BOC, PPD, TEL, or WEB. For business checking accounts, CCD.
• • • bankName	<b>Value:</b> The name of the bank associated with the bank account number. <b>Required:</b> No. <b>Format:</b> Up to 50 characters.
■ order	<b>Value:</b> Contains optional order information. <b>Required:</b> no.
• invoiceNumber	<b>Value:</b> Merchant-assigned invoice number for the subscription. <b>Required:</b> No. <b>Format:</b> Up to 20 characters. <b>Notes:</b> The invoice number will be associated with each payment in the subscription.
• description	<b>Value:</b> Description of the subscription. <b>Required:</b> No <b>Format:</b> Up to 255 characters <b>Notes:</b> The description will be associated with each payment in the subscription.
■ customer	<b>Value:</b> Contains information about the customer
• id	<b>Value:</b> Merchant-assigned identifier for the customer <b>Required:</b> No. <b>Format:</b> Up to 20 characters
• email	<b>Value:</b> The customer's email address. <b>Format:</b> Up to 255 characters. <b>Notes:</b> Required only when using a European Payment Processor.
• phoneNumber	<b>Value:</b> The customer's phone number. <b>Required:</b> No. <b>Format:</b> Up to 25 digits
• faxNumber	<b>Value:</b> The customer's fax number. <b>Required:</b> No. <b>Format:</b> Up to 25 digits
■ billTo	<b>Value:</b> Contains the customer's billing address information

**Note**

The sample code included in this document uses generic field values. When using or testing sample code, be sure to enter valid field values. Additional sample code is available for download from the Authorize.Net [Developer Center](#).

## EVO Billing and Shipping Fields

If your payment processor is EVO and you submit any of the following **billTo** fields, you must submit all of them.

- address
- firstName
- lastName
- city
- state
- zip

If your payment processor is EVO and you submit any of the following **shipTo** fields, you must submit all of them.

- address
- firstName
- lastName
- city
- state
- zip

## Input Elements for ARBUpdateSubscription

The input elements for a request to update an ARB subscription are the same as the create an ARB subscription function with the following addition and exceptions.

You must submit the subscriptionID of the subscription to be updated.

**Table 9** Input elements for ARBUpdateSubscription

Element	Description
subscriptionId	<p><b>Value:</b> The payment gateway-assigned identification number for the subscription.</p> <p><b>Format:</b> Up to 13 digits.</p>

- The subscription start date (subscription.paymentSchedule.startDate) may only be updated if no successful payments have been completed.
- The subscription interval information (subscription.paymentSchedule.interval.length and subscription.paymentSchedule.interval.unit) may not be updated.
- The number of trial occurrences (subscription.paymentSchedule.trialOccurrences) may only be updated if the subscription has not yet begun or is still in the trial period.
- If the start date is the 31st, and the interval is monthly, the billing date is the last day of each month (even when the month does not have 31 days).

All other fields are optional.

**Note**

The sample code included in this document uses generic field values. When using or testing sample code, be sure to enter valid field values. Additional sample code is available for download from the Authorize.Net [Developer Center](#).

### Example ARBUpdateSubscription

```
<?xml version="1.0" encoding="utf-8"?>
<soap:Envelope xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
xmlns:xsd="http://www.w3.org/2001/XMLSchema" xmlns:soap="http://
schemas.xmlsoap.org/soap/envelope/">
  <soap:Body>
    <ARBUpdateSubscription xmlns="https://api.authorize.net/soap/v1/">
      <merchantAuthentication>
        <name>API Login ID here</name>
        <transactionKey>Transaction Key here</transactionKey>
      </merchantAuthentication>
      <subscriptionId>141414</subscriptionId>
      <subscription>
        <name>subscription information</name>
        <paymentSchedule>
          <interval>
            <length>30</length>
            <unit>days</unit>
          </interval>
          <startDate>2007-12-01</startDate>
          <totalOccurrences>26</totalOccurrences>
        </paymentSchedule>
      </subscription>
    </ARBUpdateSubscription>
  </soap:Body>
</soap:Envelope>
```

## Input Elements for ARBCancelSubscription

The following table represents the input elements for executing an API call to the ARBCancelSubscription function.

**Table 10** Input elements for ARBCancelSubscription

Element	Description
refID	<p><b>Value:</b> Merchant-assigned reference ID for the request.</p> <p><b>Required:</b> No.</p> <p><b>Notes:</b> If included in the request, this value will be included in the response. This feature might be especially useful for multi-threaded applications.</p>
subscriptionId	<p><b>Value:</b> The payment gateway-assigned identification number for the subscription.</p> <p><b>Format:</b> Up to 13 digits.</p>

### Example ARBCancelSubscriptionRequest

```
<?xml version="1.0" encoding="utf-8"?>
<soap:Envelope xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
xmlns:xsd="http://www.w3.org/2001/XMLSchema" xmlns:soap="http://
schemas.xmlsoap.org/soap/envelope/">
  <soap:Body>
    <ARBCancelSubscription xmlns="https://api.authorize.net/soap/v1/">
      <merchantAuthentication>
        <name>API Login ID here</name>
        <transactionKey>Transaction Key here</transactionKey>
      </merchantAuthentication>
      <subscriptionId>141414</subscriptionId>
    </ARBCancelSubscription>
  </soap:Body>
</soap:Envelope>
```

#### Note

The sample code included in this document uses generic field values. When using or testing sample code, be sure to enter valid field values. Additional sample code is available for download from the Authorize.Net [Developer Center](#).

## Input Elements for ARBGetSubscriptionStatus

The following table represents the input elements for executing an API call to the ARBGetSubscriptionStatus function, in addition to the authentication elements.

**Table 11** Input elements for ARBGetSubscriptionStatus

Element	Description
refID	<p><b>Value:</b> Merchant-assigned reference ID for the request. Optional.</p> <p><b>Notes:</b> If included in the request, this value will be included in the response. This feature might be especially useful for multi-threaded applications.</p>
subscriptionId	<p><b>Value:</b> The payment gateway-assigned identification number for the subscription</p> <p><b>Format:</b> Up to 13 digits</p>

### Example ARBGetSubscriptionStatus

```
<?xml version="1.0" encoding="utf-8"?>
<soap12:Envelope xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
xmlns:xsd="http://www.w3.org/2001/XMLSchema" xmlns:soap12="http://
www.w3.org/2003/05/soap-envelope">
  <soap12:Body>
    <ARBGetSubscriptionStatus xmlns="https://api.authorize.net/soap/v1/">
      <merchantAuthentication>
        <name>string</name>
        <transactionKey>string</transactionKey>
      </merchantAuthentication>
      <subscriptionId>long</subscriptionId>
    </ARBGetSubscriptionStatus>
  </soap12:Body>
</soap12:Envelope>
```

#### Note

The sample code included in this document uses generic field values. When using or testing sample code, be sure to enter valid field values. Additional sample code is available for download from the Authorize.Net [Developer Center](#).

## Input Elements for ARBGetSubscriptionList

This request generates a list of subscriptions. The table below describes the input elements.

**Table 12** Input Elements for ARBGetSubscriptionList

Element	Description
searchType	Values include: <ul style="list-style-type: none"> <li>■ cardExpiringThisMonth</li> <li>■ subscriptionActive</li> <li>■ subscriptionInactive</li> <li>■ subscriptionExpiringThisMonth</li> </ul>
sorting	Contains sorting information.
<ul style="list-style-type: none"> <li>■ orderBy</li> </ul>	Order of transactions in response: <ul style="list-style-type: none"> <li>■ id</li> <li>■ name</li> <li>■ status</li> <li>■ createTimeStampUTC</li> <li>■ lastName</li> <li>■ firstName</li> <li>■ accountNumber (ordered by last 4 digits only)</li> <li>■ amount</li> <li>■ pastOccurrences</li> </ul>
<ul style="list-style-type: none"> <li>■ orderDescending</li> </ul>	<p><b>Value:</b> true, false, 1 or 0.</p> <p><b>Format:</b> Boolean</p>
paging	Contains information about list pages.
<ul style="list-style-type: none"> <li>■ limit</li> </ul>	<p><b>Value:</b> 1-1000</p> <p><b>Notes:</b> The number of subscriptions per page.</p>
<ul style="list-style-type: none"> <li>■ offset</li> </ul>	<p><b>Value:</b> 1-10000</p> <p><b>Notes:</b> The number of pages.</p>

### Example ARBGetSubscriptionList

```
<?xml version="1.0" encoding="utf-8"?>
<soap:Envelope xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
xmlns:xsd="http://www.w3.org/2001/XMLSchema" xmlns:soap="http://
schemas.xmlsoap.org/soap/envelope/">
  <soap:Body>
    <ARBGetSubscriptionList xmlns="https://api.authorize.net/soap/v1/">
      <merchantAuthentication>
        <name>api_login</name>
        <transactionKey>transaction_key</transactionKey>
      </merchantAuthentication>
```

```
<request>
  <searchType>subscriptionInactive</searchType>
  <sorting>
    <orderBy>amount</orderBy>
    <orderDescending>>false</orderDescending>
  </sorting>
  <paging>
    <limit>10</limit>
    <offset>1</offset>
  </paging>
</request>
</ARBGetSubscriptionList>
</soap:Body>
</soap:Envelope>
```

# XML Responses

The transaction response from the payment gateway is a set of fields that provides information about the status of a request. The following sections describe the output elements that are returned for successful API calls.

## Output Elements for ARBCreateSubscriptionResponse

The following table represents the output elements for a successful API call to the ARBCreateSubscriptionRequest function. Indentations in the Element column indicate grouping hierarchy.

**Table 13** Output elements for ARBCreateSubscriptionResponse

Element	Description
refID	<p><b>Value:</b> Merchant-assigned reference ID for the request</p> <p><b>Format:</b> Up to 20 characters</p> <p><b>Notes:</b> This element is included in the response only if it was included in the request.</p>
messages	<p><b>Value:</b> Contains information about the results of the request</p>
<ul style="list-style-type: none"> <li>■ resultCode</li> </ul>	<p><b>Value:</b> Contains additional information about the results of the request</p> <p><b>Format:</b> Ok</p> <p><b>Notes:</b> An “Ok” result code indicates that the request was processed and accepted without error.</p>
<ul style="list-style-type: none"> <li>■ message</li> </ul>	<p><b>Value:</b> Contains the result code and text</p> <p><b>Notes:</b> Any messages present are informational only.</p>
<ul style="list-style-type: none"> <li> <ul style="list-style-type: none"> <li>● code</li> </ul> </li> </ul>	<p><b>Value:</b> I00001</p>
<ul style="list-style-type: none"> <li> <ul style="list-style-type: none"> <li>● text</li> </ul> </li> </ul>	<p><b>Value:</b> Successful</p>
subscriptionId	<p><b>Value:</b> The payment gateway assigned identification number for the subscription</p> <p><b>Format:</b> Up to 13 digits</p>

**Example ARBCreateSubscriptionResponse**

---

```
<?xml version="1.0" encoding="utf-8"?>
<ARBCreateSubscriptionResponse xmlns="AnetApi/xml/v1/schema/
AnetApiSchema.xsd">
  <refId>Sample</refId>
  <messages>
    <resultCode>Ok</resultCode>
    <message>
      <code>I00001</code>
      <text>Successful.</text>
    </message>
  </messages>
  <subscriptionId>100748</subscriptionId>
</ARBCreateSubscriptionResponse>
```

---

After you receive a response from the payment gateway with an “Ok” result code, your subscription has been successfully created. The response will include the subscription ID assigned to that particular subscription. Individual transactions, or payments, for a subscription are generated automatically after 2 a.m. PST by the payment gateway according to the designated payment schedule and subscription duration. Each payment will only be viewable in the merchant’s payment gateway account when it is actually generated.

For example, if a new subscription is created with a start date of June 6, with a monthly payment interval, the first payment for the subscription will not be viewable in the merchant’s payment gateway account until June 6. All subsequent payments will be visible on their scheduled date (July 6 payment will be visible on July 6, August 6 on August 6, etc.).

**Note**

If you create a new subscription with the first payment scheduled for that same day, the initial payment for the subscription will actually be submitted the next business day.

---

Once each scheduled transaction in a subscription has been submitted, which is usually at 2 AM PST for ARB transactions, the merchant will receive an email from the payment gateway indicating the transaction status.

The merchant can also configure their account in the Merchant Interface to receive the following ARB emails:

- Daily Transaction Summary.
- Failed Transaction Notice – sent when a payment in a subscription declines or receives an error response from the processor.
- Subscription Due for Expiration – sent after the second to last payment in a subscription is submitted, to notify the merchant that the next payment is the final one in the subscription.

- Credit Card Expiration – sent immediately after the last possible successful payment in a subscription, to notify the merchant that the credit card expiration date will expire before the next scheduled payment in the subscription.
- Subscription Suspension – sent to notify the merchant that a subscription has been suspended. A subscription will be suspended if the first payment in the subscription is declined, rejected or receives an error response. Additionally, if a subscription is edited, for example payment or shipping information is changed, the subscription will be suspended if the first payment after the edits is declined, rejected or receives an error response.
- Subscription Termination – sent when a subscription is terminated. If a suspended subscription is not edited to fix the problem that caused the suspension, it will terminate on the next scheduled payment.
- Subscription Expiration – sent after a subscription has expired. Once expired, a subscription cannot be reactivated. Instead, a new subscription would have to be created.

**Note**

The Daily Transaction Summary email returns an Excel file in comma separated value (.csv) format. The merchant will receive Successful.csv, Failed.csv or both files.

---

**To select which ARB emails to receive:**

- Step 1** Log on to the Merchant Interface at <https://secure.authorize.net>.
- Step 2** Click **User Administration** under Account in the main menu on the left.
- Step 3** Select the user you would like to edit and click **Edit User**.
- Step 4** Click **Edit Profile Information** under Profile and Security Settings.
- Step 5** Under the Automated Recurring Billing (ARB) Emails section, click to select or deselect which emails the user should receive.
- Step 6** Click **Submit** to save the changes.

**Note**

Test environment accounts do not process ARB subscription transactions. If you are using a test environment account, you will not receive these email notifications in any form.

---

For more information on viewing subscriptions in the Merchant Interface or on the types of ARB emails the merchant can opt to receive, please see the Merchant Interface Online Help Files.

# Output Elements for ARBUpdateSubscriptionResponse and ARBCancelSubscriptionResponse

The output elements in for ARBUpdateSubscriptionResponse and ARBCancelSubscriptionResponse are the same as ["Output Elements for ARBCreateSubscriptionResponse"](#) with the following exception: the subscriptionID of the updated subscription is not included in the response.

# Output Elements for ARBGetSubscriptionStatusResponse

**Table 14** Output elements for ARBGetSubscriptionStatusResponse

Element	Description
refID	<p><b>Value:</b> Merchant-assigned reference ID for the request.</p> <p><b>Format:</b> Up to 20 characters.</p> <p><b>Notes:</b> This element is included in the response only if it was included in the request.</p>
messages	<p><b>Value:</b> Contains information about the results of the request.</p>
<ul style="list-style-type: none"> <li>■ resultCode</li> </ul>	<p><b>Value:</b> Contains additional information about the results of the request.</p> <p><b>Format:</b> Ok</p> <p><b>Notes:</b> An "Ok" result code indicates that the request was processed and accepted without error.</p>
<ul style="list-style-type: none"> <li>■ message</li> </ul>	<p><b>Value:</b> Contains the result code and text.</p> <p><b>Notes:</b> Any messages present are informational only.</p>
<ul style="list-style-type: none"> <li> <ul style="list-style-type: none"> <li>● code</li> </ul> </li> </ul>	<p><b>Value:</b> The response code that represents the status.</p>

## Error Response

The following table describes the output elements for an error response to any of the requested API methods. Error Response

**Table 16** Output elements for an error response

Element	Description
<b>refID</b>	<p><b>Value:</b> Merchant-assigned reference ID for the request</p> <p><b>Format:</b> Up to 20 characters</p> <p><b>Notes:</b> This element is included in the response only if it was included in the request.</p>
<b>messages</b>	<p><b>Value:</b> Contains information about the results of the request</p>
<ul style="list-style-type: none"> <li>■ <b>resultCode</b></li> </ul>	<p><b>Value:</b> Contains additional information about the results of the request</p> <p><b>Format:</b> Error</p> <p><b>Notes:</b> The request resulted in one or more errors.</p>
<ul style="list-style-type: none"> <li>■ <b>message</b></li> </ul>	<p><b>Value:</b> Contains the result code and text</p> <p><b>Notes:</b> Messages provide more details about the error(s).</p>
<ul style="list-style-type: none"> <li>● <b>code</b></li> </ul>	<p><b>Value:</b> The code that represents the reason for the error</p>
<ul style="list-style-type: none"> <li>● <b>text</b></li> </ul>	<p><b>Value:</b> A text description of the error</p>

```

<?xml version="1.0" encoding="utf-8"?>
<ErrorResponse xmlns="AnetApi/xml/v1/schema/AnetApiSchema.xsd">
  <messages>
    <resultCode>Error</resultCode>
    <message>
      <code>E00003</code>
      <text> An error occurred while parsing the XML request.
      </text>
    </message>
  </messages>
</ErrorResponse>

```

## Error Codes

The following table lists the common error codes and texts.

**Table 17 Error codes**

Code	Text	Description
E00001	An error occurred during processing. Please try again.	An unexpected system error occurred while processing this request.
E00002	The content-type specified is not supported.	The only supported content-types are text/xml and application/xml.
E00003	An error occurred while parsing the XML request.	This is the result of an XML parser error.
E00004	The name of the requested API method is invalid.	The name of the root node of the XML request is the API method being called. It is not valid.
E00005	The merchantAuthentication.transactionKey is invalid or not present.	Merchant authentication requires a valid value for transaction key.
E00006	The merchantAuthentication.name is invalid or not present.	Merchant authentication requires a valid value for name.
E00007	User authentication failed due to invalid authentication values.	The name/and or transaction key is invalid.
E00008	User authentication failed. The payment gateway account or user is inactive.	The payment gateway or user account is not currently active.
E00009	The payment gateway account is in Test Mode. The request cannot be processed.	The requested API method cannot be executed while the payment gateway account is in Test Mode.
E00010	User authentication failed. You do not have the appropriate permissions.	The user does not have permission to call the API.
E00011	Access denied. You do not have the appropriate permissions.	The user does not have permission to call the API method.
E00012	A duplicate subscription already exists.	A duplicate of the subscription was already submitted. The duplicate check looks at several fields including payment information, billing information and, specifically for subscriptions, Start Date, Interval and Unit.
E00013	The field is invalid.	One of the field values is not valid.
E00014	A required field is not present.	One of the required fields was not present.
E00015	The field length is invalid.	One of the fields has an invalid length.
E00016	The field type is invalid.	The field type is not valid.
E00017	The startDate cannot occur in the past.	The subscription start date cannot occur before the subscription submission date.  (Note: validation is performed against local server date, which is Mountain Time.)
E00018	The credit card expires before the subscription startDate.	The credit card is not valid as of the start date of the subscription.

**Table 17 Error codes (Continued)**

Code	Text	Description
E00019	The customer taxId or driversLicense information is required.	The customer tax ID or driver's license information (driver's license number, driver's license state, driver's license DOB) is required for the subscription.
E00020	The payment gateway account is not enabled for eCheck.Net subscriptions.	This payment gateway account is not set up to process eCheck.Net subscriptions.
E00021	The payment gateway account is not enabled for credit card subscriptions.	This payment gateway account is not set up to process credit card subscriptions.
E00022	The interval length cannot exceed 365 days or 12 months.	The interval length must be 7 to 365 days or 1 to 12 months.
E00024	The trialOccurrences is required when trialAmount is specified.	The number of trial occurrences cannot be zero if a valid trial amount is submitted.
E00025	Automated Recurring Billing is not enabled.	The payment gateway account is not enabled for Automated Recurring Billing.
E00026	Both trialAmount and trialOccurrences are required.	If either a trial amount or number of trial occurrences is specified then values for both must be submitted.
E00027	The test transaction was unsuccessful.	An approval was not returned for the test transaction.
E00028	The trialOccurrences must be less than totalOccurrences.	The number of trial occurrences specified must be less than the number of total occurrences specified.
E00029	Payment information is required.	Payment information is required when creating a subscription.
E00030	A paymentSchedule is required.	A payment schedule is required when creating a subscription.
E00031	The amount is required.	The subscription amount is required when creating a subscription.
E00032	The startDate is required.	The subscription start date is required to create a subscription.
E00033	The subscription Start Date cannot be changed.	Once a subscription is created the Start Date cannot be changed.
E00034	The interval information cannot be changed.	Once a subscription is created the subscription interval cannot be changed.
E00035	The subscription cannot be found.	The subscription ID for this request is not valid for this merchant.
E00036	The payment type cannot be changed.	Changing the subscription payment type between credit card and eCheck.Net is not currently supported.
E00037	The subscription cannot be updated.	Subscriptions that are expired, canceled or terminated cannot be updated.

**Table 17 Error codes (Continued)**

Code	Text	Description
E00038	The subscription cannot be canceled.	Subscriptions that are expired or terminated cannot be canceled.
E00045	The root node does not reference a valid XML namespace.	An error exists in the XML namespace. This error is similar to E00003.

## Duplicate Subscription Verification

A duplicate check occurs against every ARB subscription created in an account in order to prevent duplicate subscriptions from inadvertently being created. The following is a list of the fields that are verified. If ALL of the verified fields are the same, an E00012 will occur and the subscription is not successfully created in the account. The duplicate check verifies for an indefinite amount of time.

- subscription.Article.MerchantID
- subscription.Article.CustomerInfo.Payment.CreditCard.CardNumber
- subscription.Article.CustomerInfo.Payment.eCheck.RoutingNumber
- subscription.Article.CustomerInfo.Payment.eCheck.AccountNumber
- subscription.Article.CustomerInfo.CustomerID
- subscription.Article.CustomerInfo.BillingInfo.BillToAddress.FirstName
- subscription.Article.CustomerInfo.BillingInfo.BillToAddress.LastName
- subscription.Article.CustomerInfo.BillingInfo.BillToAddress.Company
- subscription.Article.CustomerInfo.BillingInfo.BillToAddress.StreetAddress
- subscription.Article.CustomerInfo.BillingInfo.BillToAddress.City
- subscription.Article.CustomerInfo.BillingInfo.BillToAddress.StateProv
- subscription.Article.CustomerInfo.BillingInfo.BillToAddress.Zip
- subscription.OrderInfo.Amount
- subscription.OrderInfo.Invoice
- subscription.Recurrence.StartDate
- subscription.Recurrence.Interval
- subscription.Recurrence.Unit

## General Errors for Individual Payments in a Subscription

Anytime an error occurs that prevents the payment gateway from processing a scheduled payment in a subscription, the payment will result in a general error. For example, if the credit card expiration date on file for a subscription is not updated before it expires, the next scheduled payment will not be processed and the transaction will result in a general error. These subscriptions will not be suspended or be automatically terminated unless the general error occurs on the first scheduled payment in the subscription.

Some of the most common reasons for a payment to receive a general error are:

- The credit card number or expiration date on file has expired.
- The payment gateway account was in test mode at the time of the scheduled payment.
- eCheck.Net has been disabled for the payment gateway account or the specific eCheck.Net type has been disabled.
- A notice of change (NOC) has been received for the eCheck.Net subscription.

Payments with general errors can be identified on the completed transactions page of the Merchant Interface. They will display “N/A” in the Transaction ID field and “General Error” in the Transaction Status field.

Transactions that result in general errors can also be found in the Failed.csv Excel file that comes when you are enabled to receive the Daily Transaction Summary email.
