About This Guide

Audience and Purpose

This guide is written for merchants who use the Authorize.Net mobile application to process transactions. Some operations require administrator privileges in the Authorize.Net Merchant Interface.

Conventions

Note and Important Statements

A Note contains helpful suggestions or references to material not contained in the document.

An Important statement contains information essential to successfully completing a task or learning a concept.

Text and Command Conventions

Customer Support

For support information about any Authorize.Net service, visit the Support Center:

https://support.authorize.net/
Introduction

What’s New?

- Printed receipts for supported USB and Bluetooth printers, as well as network printers.
- Star AllReceipts integration.
- Ability to set whether the signature line appears, based on custom amounts.

Hardware Support

Mobile Devices

- The Authorize.Net Mobile Application for Android supports devices running Android 5.0 or later, with connectivity from a wireless carrier or Wi-Fi provider.

- The Authorize.Net Mobile Application for iOS supports devices running Apple iOS 9.0 or later, with connectivity from a wireless carrier or Wi-Fi provider.

Compatible Card Readers

Supported mobile card readers may be purchased through our partner POS Portal. For more information, visit https://partner.posportal.com/authorizenet/auth/.
For More Information

For more information about this product, including availability, pricing, and transaction rates, contact your merchant bank and your Authorize.Net sales contact.

Also, see our EMV FAQs page.

Feedback

If you have any comments or suggestions about the Authorize.Net Mobile Application, please contact feedback@authorize.net.

If you have any comments or suggestions about this document, please contact documentation@authorize.net.
Before downloading the app, you should review settings in the Authorize.Net Merchant Interface which might affect your processing.

After you complete the tasks in the Merchant Interface and download and install the app, you can use the app’s Settings page to set up your payment options - see Using the Menu Button.

**Reviewing Payment Form Settings**

The Payment Form settings in the Merchant Interface enable you to specify certain fields as being required when transactions are submitted to Authorize.Net. Because the fields passed to Authorize.Net from the Authorize.Net Mobile Application are already defined, you may experience transaction errors (Reason Response Code 33) if you have other fields selected as required in the Payment Form settings. To prevent these errors, log in to the Merchant Interface and review the Payment Form settings.

**To review payment form settings:**

1. **Step 1** Log in to your account at https://account.authorize.net.
2. **Step 2** From the main toolbar, click Account.
3. **Step 3** Under Transaction Format Settings, click Payment Form.
4. **Step 4** Click Form Fields.
5. **Step 5** Uncheck all selected fields in the Required column.
6. **Step 6** Click Submit.

Changes made to the Payment Form settings will affect any software solution that posts transactions using the Authorize.Net API. Contact your developer to ensure that other solutions are not adversely affected by these changes.
Configuring Address Verification Service (AVS) Settings

AVS helps detect suspicious payment card transactions. It compares the billing address provided by the cardholder with the billing address on file at the payment card issuing bank. A transaction is accepted or rejected based on your AVS settings in the Merchant Interface. When a transaction is rejected, the application displays a status of Declined.

To configure your AVS settings:

- **Step 1** Log in to the Merchant Interface at https://account.authorize.net/.
- **Step 2** From the main toolbar, click Account.
- **Step 3** Select Settings.
- **Step 4** In the Security Settings section, click Address Verification Service.
- **Step 5** Check the AVS codes for which the payment gateway should reject transactions.
- **Step 6** Click Submit.

Changes made to the AVS settings will affect any transaction submitted using the Authorize.Net API. Contact your developer to ensure that other solutions are not adversely affected by these changes.

Updating Business Information

To edit your business information, you must log in to the Authorize.Net Merchant Interface. If you have not entered merchant information in the app, the receipt will use the information entered in this section. If merchant information is entered in the app, the information in the app takes precedence.

To update your business information:

- **Step 1** Log in to the Merchant Interface at https://account.authorize.net/.
- **Step 2** In the main toolbar, click Account.
- **Step 3** In the left menu, click Merchant Profile.
**Chapter 2  Setting Up**

### Step 4
Click **Edit Business Information**.

### Step 5
Update your business information as needed by editing the provided text fields and drop-down menus.

### Step 6
Click **Submit**.

---

### Managing Mobile Devices

Using the Authorize.Net Merchant Interface, an account administrator can enable, disable, or delete mobile devices from an account.

**To manage mobile devices:**

#### Step 1
Log in to the Merchant Interface at [https://account.authorize.net](https://account.authorize.net).

#### Step 2
Navigate to **Account > Settings > Security Settings > General Security Settings > Mobile Device Management**.

#### Step 3
Select a device in the Device ID column.

#### Step 4
Click one of the following options: Enable Device, Disable Device, or Delete Device.

---

### Downloading and Launching the Authorize.Net Mobile Application

You can download the Authorize.Net Mobile Application from Google Play (Android), Apple’s App Store or iTunes (iOS), by searching for Authorize.Net. Once the application is finished downloading, it will be in the Applications menu on your home screen.

### Accepting Terms and Conditions

The first time you launch the Authorize.Net Mobile Application on your mobile device, you are prompted to accept the Terms and Conditions specific to the Authorize.Net Mobile Application. You will continue to be subject to your existing Authorize.Net Payment Gateway Merchant Service Agreement.
Logging In to Your Account

After you accept the Terms and Conditions, the login page appears. Enter your Merchant Interface credentials, choose whether to use a sandbox account, and tap Log In. You can set the slider to Remember Me so that your credentials are saved.

Using a Sandbox Account

We recommend that you test your implementation using your sandbox account before processing live transactions. Tap the Use Sandbox Account slider on the login page.

If you do not have a sandbox account, tap the Create Sandbox Account link.

Allowed Special Characters

The following table shows which special characters are allowed, and for which fields.

<table>
<thead>

Using the Tutorial

The first time you log in to the app, a tutorial is displayed. You can swipe right to view all the tutorial panes. On each pane, you can choose Try Now to try the functionality for that pane, or you can choose Skip to go into the setup.

Updating Your Card Reader

The first time you log in to the app, it will attempt to update your card reader’s firmware. You can skip this step by tapping Skip or check for an update by tapping Check Now.
Using the Menu Button

To access the app menu, tap the Menu button in the upper-left corner. The button resembles three horizontal bars. Tapping the Menu button brings up the app menu.

Menu Button

Options in the app menu include:

- Current Transaction—see "Transactions," page 24 for more information.
- Transaction History—see "Transaction History," page 30 more information.
- Settings—see "Setting Up the Application," page 15 more information.
- Customer Support
- User Guide
- Terms and Conditions
- Tutorial
- Logout

Setting Up the Application

When you log in for the first time, you are given the choice to update settings or accept payments. We recommend that you update your settings before accepting payments. You can also navigate to the Settings page at any time by tapping the Menu button and choosing Settings.

Card Readers

Options for connecting and configuring a card reader are found here.

Connect

To connect a Bluetooth reader:

Step 1 Turn the reader on.
Step 2 Pair the reader through your device’s Settings menu.
**Chapter 2  Setting Up**

**Step 3**  In the POS app, tap **Connect** if you are using Android and the radial button if you are using iOS.

**Step 4**  Tap **BT Connection**.

**Step 5**  Choose your card reader by tapping the radial button next to it.

**Step 6**  If your account can process EMV transactions set the reader to **Chip**.

**Step 7**  Tap **Connect**.

---

**To connect an audio jack reader:**

**Step 1**  Turn the reader on.

**Step 2**  Pair the reader through your device’s Settings menu.

**Step 3**  In the POS app, tap **Connect** if you are using Android and the radial button if you are using iOS.

**Step 4**  Tap **Audio Jack**.

**Step 5**  Choose your card reader by tapping the radial button next to it.

**Step 6**  If your account can process EMV transactions set the reader to **Chip**.

**Step 7**  Tap **Connect**.

---

**Updates**

To update the card reader’s firmware, tap **Card Reader Updates** and then tap **Check For Updates**. Please allow up to 15 minutes for the card reader to check for updates, and to download and install them to the reader.

---

**Note**

Updates are only available for BBPOS Chipper 2X/Anywhere Commerce Walker C2X readers.

---

**Check Reader Update on Login**

When this box is checked, the application will check for reader updates each time it starts.
Chapter 2

Catalog Management
The POS Setup page contains several important options that enable you to add departments, categories, and items.

Tax Types
This feature enables you to create specific tax types that can be selected at checkout.

To add a tax type:

Step 1 Tap + Add Tax Type. The Add Tax Type page displays.
Step 2 Tap the Tax Type field and enter a name for the tax type.
Step 3 To modify an existing tax type, tap Base Tax (Optional) and select the existing tax type.
Step 4 Tap Tax Rate Name and enter a name for the tax rate.
Step 5 Tap the Rate (%) field and enter the tax rate percentage.
Step 6 Tap Save to return to the Tax Types page.

Sales Departments
This feature enables you to add sales departments. For example a sales department might be Electronics. Departments can contain categories, making them the top level of the hierarchy.

To add a sales department:

Step 1 Tap + Add Department. The Add New Department page displays.
Step 2 Tap Department Name and enter a name for the department.
Step 3 Tap Select Tax Type to select a tax type. If no tax type exists, you can add one from the POS Setup page.
Step 4 Tap Save to return to the Sales Department page.

Sales Categories
This feature enables you to create sales categories, which can be contained within a sales department. For example, within the Electronics sales department, you can create a Television category.
Chapter 2 Setting Up

**Sorting Categories**
You can sort through existing categories by using three sorting options, all of which can be found at the top of the screen next to Sales Categories List:

**Search**—To search for a particular category by its name, tap the magnifying glass icon to bring up the search field. Enter the category name or a keyword. Matches will automatically be shown and you can tap one to select it.

**Grid View**—Tap the grid icon to display multiple categories per row.

**List View**—Tap the List icon to display one category per row.

**Creating Categories**

**To create a sales category:**

---

**Step 1** Tap **Category Name** and enter the name of the category.

**Step 2** Tap **Upload Images** to add an image associated with this category. The image will be scaled to fit your device. The minimum size is 50kb and the maximum is 5MB. Most popular image types are accepted, including JPG, PNG, and BMP.

**Step 3** Tap **Select Department** to select an existing sales department. If no sales department exists, you can create one from the POS Setup page.

**Step 4** Tap **Select Tax Type** to select a tax type. If no tax type exists, you can add one from the POS Setup page.

**Step 5** Tap **Save** to return to the Sales Categories page.

---

**Sales Items**
This feature enables you to create specific sales items that can be contained within a sales category. For example, within the **Television** sales category, you could create an item called **50-inch 4K Display**.

**Sorting Items**
You can sort through existing items by using three sorting options, all of which can be found at the top of the screen next to Sales Items List:

**Search**—To search for a particular item by its name, tap the magnifying glass icon to bring up the search field. Enter the item name or a keyword. Matches will automatically be shown and you can tap one to select it.

**Grid View**—Tap the grid icon to display multiple items per row.
**List View**—Tap the List icon to display one item per row.

**Creating Sales Items**
When you tap **Add Sale Item** in the Sales Items screen of the POS setting, you are given two options:

- To add a single item using the app, tap **Add One**.
- To use a template for creating more than one item at a time, tap **Use Template**.

**To create one sales item using the app:**

**Step 1** Tap **+ Sales Item**. The Add Sales Item page displays.

**Step 2** Tap **Item Name** and add a name for the item.

**Step 3** Tap **Item ID** and add the ID number for this item.

**Step 4** Tap **UPC** and add the Universal Product Number for this item.

**Step 5** Adjust the **Available** slider to show whether this item is in stock.

**Step 6** Tap **Upload Image** to upload an image associated with this item. The image will be scaled to fit your device. The minimum size is 50kb and the maximum is 5MB. Most popular image types are accepted, including JPG, PNG, and BMP.

**Step 7** Tap **Retail Price** and enter the pre-tax price of the item.

**Step 8** Tap **Select Category** to select an existing sales category. If no sales category exists, you can create one from the POS Setup page.

**Step 9** Tap **Select Tax Type** to select a tax type. If no tax type exists, you can add one from the POS Setup page.

**Set Default Landing View**

To configure the app to open to a particular area each time you log in, select one of the following:

- Quick Add
- Categories
- All Items
Using the Template

The bulk item upload feature enables you to upload multiple items at once by adding them to a spreadsheet application and uploading the spreadsheet to the app. Tapping the Bulk Upload link in the Settings page brings up the Bulk Upload page. You must first create your catalog.

Catalog Creation Workflow

Before creating items using a template, you must first use the app to manually create any categories, departments, and taxes that the items will use. Use the following workflow:

1. Tax Types
2. Sales Departments
3. Sales Categories

After these catalog items are complete, you can begin the bulk upload process, in which the catalog elements that you created are put into a CSV file that you can open with a spreadsheet application.

To use the template to create multiple items:

Step 1  Tap Step 1 and then tap Export.

The app exports all your catalog elements to a CSV file on your device.

Step 2  Transfer the file to your computer and add items to it according to the following table.

<table>
<thead>
<tr>
<th>Spreadsheet Row</th>
<th>Required/Optional</th>
<th>Format</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>System Generated ID</td>
<td>N/A</td>
<td>N/A</td>
<td>This is a System Generated ID that we assign to each item in your Catalog. This column should not be changed or added to.</td>
</tr>
<tr>
<td>Item ID</td>
<td>Required</td>
<td>String. 64-character maximum.</td>
<td>Merchant-assigned ID for each item.</td>
</tr>
<tr>
<td>Item Name</td>
<td>Required</td>
<td>String. 64-character maximum.</td>
<td>Name of the item.</td>
</tr>
<tr>
<td>UPC</td>
<td>Optional</td>
<td>String. 64-character maximum.</td>
<td>Universal Product Number for the item.</td>
</tr>
<tr>
<td>Category</td>
<td>Required</td>
<td>String. 64-character maximum.</td>
<td>Category assigned to the Item.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td><strong>Note</strong> The Category must already exist in your Catalog. This field is not used for adding new Categories.</td>
</tr>
</tbody>
</table>
When you finish, tap the **Step Completed** button.

**Step 3**  Tap **Select Your File** and select the updated CSV file from your device. Then tap **Upload**. A confirmation page appears.

**Step 4**  Tap **Start Import**.

### Transaction Settings

The following settings apply to payment transactions.

### Default Sales Tax

Tap the slider to enable the sales tax feature. Then tap Default Sales Tax to set the default sales tax rate for payment transactions. Use the number dials to select the default sales tax percentage. When you are finished, tap **OK** to return to the Settings page.

The Default Sales Tax applies to Quick Add Items only. Catalog items are taxed at rates assigned in the POS Setup section.

### Receipts

This section of Settings provides you with variety of options for printing receipts. For a list of supported Bluetooth and USB printers, see “Supported Printers,” page 33.
BT Printer
To connect a Bluetooth printer to the app, first verify that the printer is on and Bluetooth is enabled for your device. Pair the printer in your device's Settings menu. Then tap the BT Printer option.

USB Printer
To connect a USB printer to the app, first verify that the printer is connected to your device by a USB cable. Then tap the USB Printer option.

Other Printer
To a connect a network printer, tap the Other Printer option and select a print service. Cloud Print and Default Print Service are included in the app. You can also tap + Add service to select a service from a list.

Auto Print Receipts
Enable this setting to print receipts automatically.

Star Cloud Services
The app supports the Star AllReceipts service, which is a customer digital convenience and merchant loyalty opportunity program. Tap the Star Cloud Services option to enable it. The Cloud Services menu appears. Enter a username and password and tap Register.

Signature
If you choose to enable the Signature option during checkout, you can specify an amount that triggers the signature. To set a custom amount, tap the For purchase > 0 link in the Signature section and enter the amount that will trigger the signature during checkout.

Tipping
Tap the slider to enable the tipping feature in the transaction page.

Note
When tipping is enabled, a signature is always required. Keep this requirement in mind when adjusting the Skip Signature option later in the Settings page.

Shipping
Tap the slider to enable a shipping option during checkout. Doing so enables you to add shipping address information at the Transaction page. Shipping information includes:

- First name
- Last name
- Address one
Chapter 2  Setting Up

- Address two
- City
- State
- ZIP code
- Phone number

**Merchant Info**

Enter the following information about the merchant.

- Business name
- Address
- City
- State
- ZIP code
- Phone number
- Email address

---

**About**

This section shows the version of the app and the date it was last updated.
To take a payment from a customer, use the Transaction page. To display a transaction, tap the menu button and then tap **Current Transaction**.

### The Transaction Page

There are three tabs at the top of the Transaction page which enable you to add items to the order:

- **Quick Add**—You can use this page to add items that are not defined in the Manage console by typing in their name, amount, and other order information.
- **Categories**—Select items from a hierarchy of categories.
- **All Items**—A list of all items that are defined in the Manage console.
Quick Add

Figure 1   The Quick Add Page

To quick-add an item:

**Step 1**  Tab the **Quick Add** tab to display the Quick Add page.

**Step 2**  Tap the **Goods/Services** field to enter the name of the item. If a name is not entered here, the item is recorded as **Goods/Services**.

**Step 3**  Enter a price in the **$0.00** field.

**Step 4**  If you enabled sales tax and you did not set a default, or you want to use a tax rate different from the default, tap the **Sales Tax** field and enter the tax rate.

**Step 5**  If you enabled shipping in the Settings page, tap the **Shipping** field and enter the shipping charge and the customer’s shipping information.
Step 6 Tap the **Add Item** button in the bottom-right corner of the Transaction page. The item is added to the order and the shopping cart icon in the upper-right corner shows the number of items for this order.

Step 7 Repeat steps 1-6 to quick-add more items.

---

### Categories

The categories tab contains a hierarchy of categories selected from the Management page.

**To select an item from a category:**

**Step 1** Tap the **Categories** tab to display the Categories page.

**Step 2** Tap a category from which to select an item.

- You can select an item by tapping it. Each time you tap it, an additional item will be added to the order.
- Tap the plus (+) icon next to the item to add a single item.
  - Tap the plus (+) sign again to display the item quantity pop-up window. Choose the number of items, either by tapping the plus (+) or minus (-) icons, or by tapping the quantity and typing the number directly. Then choose either **Update** or **Remove All**.

**Step 3** Repeat steps 1-3 to add additional items from categories.

---

### All Items

This tab contains all items that have been created in the Management page.

**To select an item from the All Items page:**

**Step 1** Tap the **All Items** tab to display the All Items page. All items from every category are displayed.

**Step 2** Select an item in one of several ways:

- You can select an item by tapping it. Each time you tap it, an additional item will be added to the order.
- Tap the plus (+) icon next to the item to add a single item.
  - Tap the plus (+) sign again to display the item quantity pop-up window. Choose the number of items, either by tapping the plus (+) or minus (-) icons, or by tapping the quantity and typing the number directly.
the quantity and typing the number directly. Then choose either Update or Remove All.

**Step 3** Repeat steps 1 and 2 to add additional items from categories.

---

## Checking Out With a Card Reader

When you are finished adding items to the order, you can tap the card swipe icon to check out with a card reader. Alternatively, you can review the order before checking out. To review, tap the shopping cart icon in the upper-right corner of the app to display all selected items. Review the items and either the back arrow to return to the transaction, or tap Checkout to continue to the checkout page.

The checkout page displays the amount of the transaction.

**To pay by credit card using a card reader:**

**Step 1** Turn on and connect the card reader. For more information on setting up the card reader, see Card Readers, page 15.

**Step 2** Insert the smart-chip card into the slot or swipe the card’s magnetic strip. See the card reader’s documentation for more information about this process.

**Step 3** If tips are enabled, the customer chooses a tip option. For more information about tips, see “Transaction Summary,” page 29.

**Step 4** Unless you enabled Skip Signature in the Setting page, have the customer sign their name.

**Step 5** Tap Authorize. Do not remove the card or reader while the amount is authorizing. After authorization is complete, the Transaction Summary screen displays.
Checking Out Without a Card Reader

Without a card reader plugged in, you can either key in credit card information manually, or have the customer pay by cash.

To manually enter credit card information:

**Step 1** Tap **Key In Card Info**.

**Step 2** Tap the **Card Number** field and enter the valid credit card number.

**Step 3** Tap the **MM/YY** field and enter the card’s valid expiration date in the format MM/YY.

**Step 4** Tap the **ZIP** field to enter the ZIP code that is associated with the card.

**Step 5** Tap the **Charge** button. The Authorize page appears.

**Step 6** If you enabled tips in the Settings page, tap the Tip field and have the customer enter a tip amount.

**Step 7** Unless you enabled Skip Signature in the Settings page, have the customer enter their signature.

**Step 8** Tap **Authorize**. After authorization is complete, the Transaction Summary screen displays.

To pay with cash:

**Step 1** Tap **Key In Card Info**.
**Step 2**  
Tap the **Cash** tab.
- To enter an exact amount, tap the **Cash Tendered** field.
- To enter individual bills, tap the number of the denomination for each bill.
- To simple accept the full transaction amount, tap **Exact Amount**.

**Step 3**  
Tap **Accept Cash**.

---

**Transaction Summary**

After the transaction is successfully submitted, the Transaction Summary page displays. A Transaction ID is provided and the customer’s receipt is shown. To email the receipt to the customer, tap the **Email** field and enter their valid email address. The receipt is sent but is not stored on your device. To begin a new transaction, tap **New Transaction**.

**Logging Out of the Authorize.Net Mobile Application**

To log out of the application, tap to the Options button, tap **Log Out**, and then confirm that you want to log out.

If the application is idle for 30-minutes, the next action prompts the user to log in. This also happens after every 8-hour interval.

**Response Reason Codes**

Response Reason Codes may be displayed in parentheses within the Authorize.Net Mobile Application when an error occurs during processing. To view information associated with specific codes, use our Reason Response Code Tool:

https://developer.authorize.net/api/reference/responseCodes.html
To view the transaction history, tap the Menu button and select Transaction History.

You can choose the following types of transactions:

- **Last Transaction**—this option is chosen by default and it displays the details of the last transaction processed by this device. You can refund the transaction by tapping the Refund button.
- **Unsettled Transactions**—this option displays purchases or refunds that are pending settlement. Tap a transaction to display its details. You can void an unsettled transaction from the detail page by tapping Void.
- **Settled Transactions**—this option displays purchases that have already settled as part of the standard Authorize.Net settlement process. Tap a transaction to view its details. You can refund a transaction from the details page by tapping Refund.
- **Voided Transactions**—this option displays voided transactions, which are defined as unsettled transactions that were canceled before settlement. Tap a transaction to view its details.
- **Refunded Transactions**—this option displays those settled transactions that were refunded to the original card. Tap a transaction to view its details.
- **Cash Transactions**—This option displays transactions that were paid for by cash. Cash transactions are only stored on the device (not in the Merchant Interface), and only for 7 days.

**Searching Transactions**

You can search for specific transactions from the Transaction History page by tapping the Transaction ID field. Enter a valid Transaction ID, tap the magnifying glass icon, and the details for that transaction appear.
Android Audio Considerations

Credit card readers that plug into a mobile device draw power from the device’s audio power, and they rely on that device’s audio power being set to maximum in order to work properly. Various audio settings can interrupt this power.

Phone Audio Settings

When using an Android device, all audio permissions should be allowed.

All special audio settings should be off. This includes but is not limited to:

- Dolby
- MI Sound
- Beats Audio
- Boom Sound
- BesAudEnh
- DTS
- DAC

Audio Warning

A volume warning was added in Android versions 4.2 and newer that limits the maximum volume of sound. This may affect the communication between the Android device and your card reader. To ensure that the device can output high volume, the user must accept the warning. Most Android devices will show the warning automatically, but some devices will require the user to manually make this change. The user will be prompted to accept this warning after each reboot. The following methods can be used:
Method 1 - Warning Opens Automatically

If the warning was not accepted before, it will show automatically when the first Controller command is called. You must accept the warning.

Method 2 - Warning Opens in Setting When User Changes Volume

Step 1 Plug the card reader into the headphone jack.
Step 2 Open Settings in the App menu and choose Sound.
Step 3 Select “Music, video, games and other media”, then maximize the volume.

Method 3 - Warning When Opening a Music or Video App

Step 1 Plug the card reader into the headphone jack.
Step 2 Open the music or video app.
Step 3 Press volume-up button on the phone to maximize the volume.

Method 4 - Warning When User Maximizes Volume

Step 1 Plug the card reader into the headphone jack.
Step 2 Press volume-up button on the phone to maximize the volume.
Supported Printers

The app supports the following Bluetooth and USB printers:

- Star TSP143IIU FuturePrint USB printer:
  - Android—USB type B-to-micro USB
  - iOS—USB to Lightning cable
- Star TSP143IIBI FuturePrint Bluetooth printer
- Star SM-T300i Bluetooth printer
- Epson TM –T88IV USB printer—Android only, USB type B-to-micro USB; iOS not supported
